

Simple Native Android App Development Task

Objective: Create a basic Android application to provide daily football tips for fans.

This is a very simple app that can be made in less than a day.

Features:

App Interface:

- Display an image at the top.
- Show a title below the image.
- Present a clickable text line that navigates to the tip.

Link Behavior:

- Option to open the link within the app.
- Option to open the link in the phone's browser.
- This behavior is controlled by the admin panel.

Backend Admin Panel: To manage the content shown on the app. From the backend, you should be able to:

- Update the image.
- Edit the title.
- 1. Modify the text line and 2. modify the link.
- Choose whether the link opens inside the app or in the phone's browser.

Ensure no caching or cookies are saved when the link is accessed.

Note: If this app is successfully developed, there are potential opportunities for future projects.
